Talking Currents and RADAR

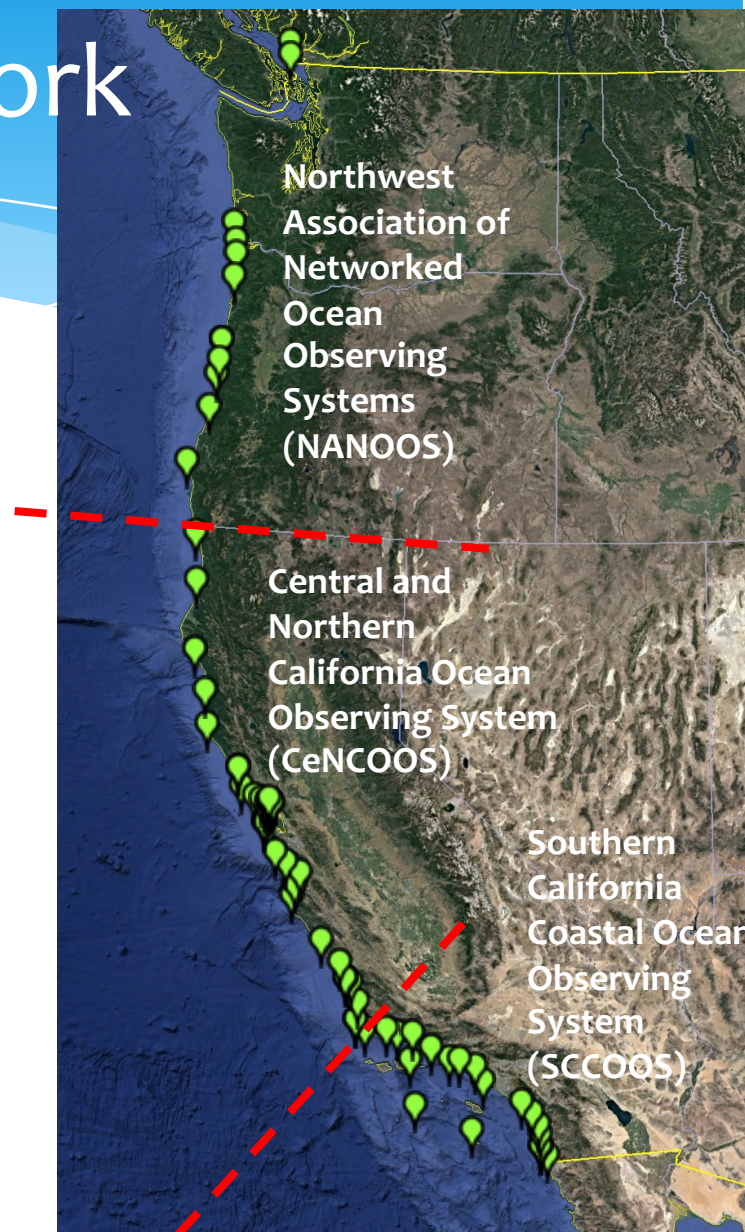

- Radio Detection and Ranging
- Use radiowaves to determine the movement of surface waters by bouncing off waves

US West Coast HFR Network

- Three regional ocean observing networks (NANOOS, CeNCOOS and SCCOOS)
- 72 coastal stations, including 5 inside San Francisco Bay

US West Coast HFR Network

- Three regional ocean observing networks (NANOOS, CeNCOOS and SCCOOS)
- 72 coastal stations, including 5 inside San Francisco Bay
- Largest geographic coverage in last 10 years

US West Coast Regional Climate and Events

➤ Climate

- Upwelling Season (March-August)
- Relaxation Season (Sept-Jan)

➤ Events

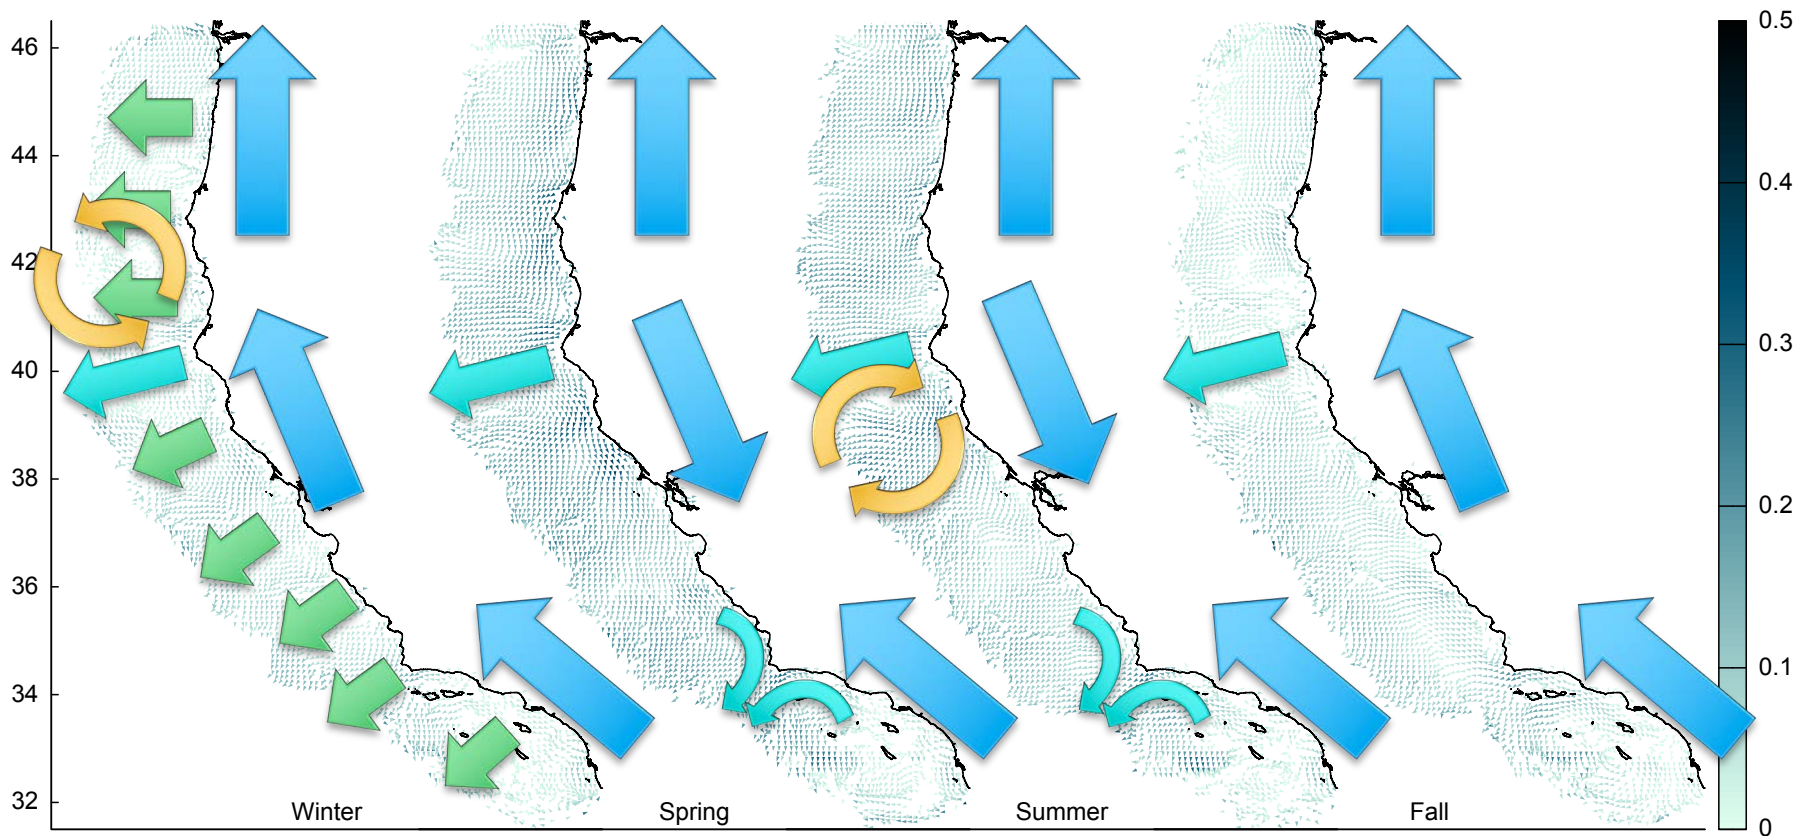

- 2009-10 El Niño
- 2011 La Niña
- 2014-2015 Warm Blob (Marine Heatwave)
- 2015-16 El Niño

A Decade of Data (2008-2018)

A Decade of Data (2008-2018)

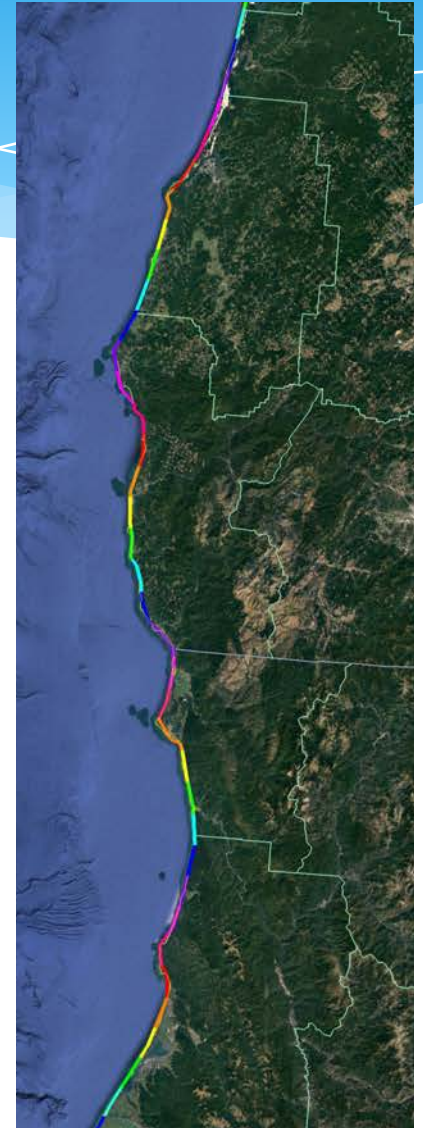

Parsing a Decade of High Resolution Data

1. Seasonal variability
 - Search for latitudinal upwelling signals
2. Inter-annual variability
 - Search for changes associated with ocean climate events
3. Cross-shelf variability
 - Search for structure and dependence on shoreline for current steering

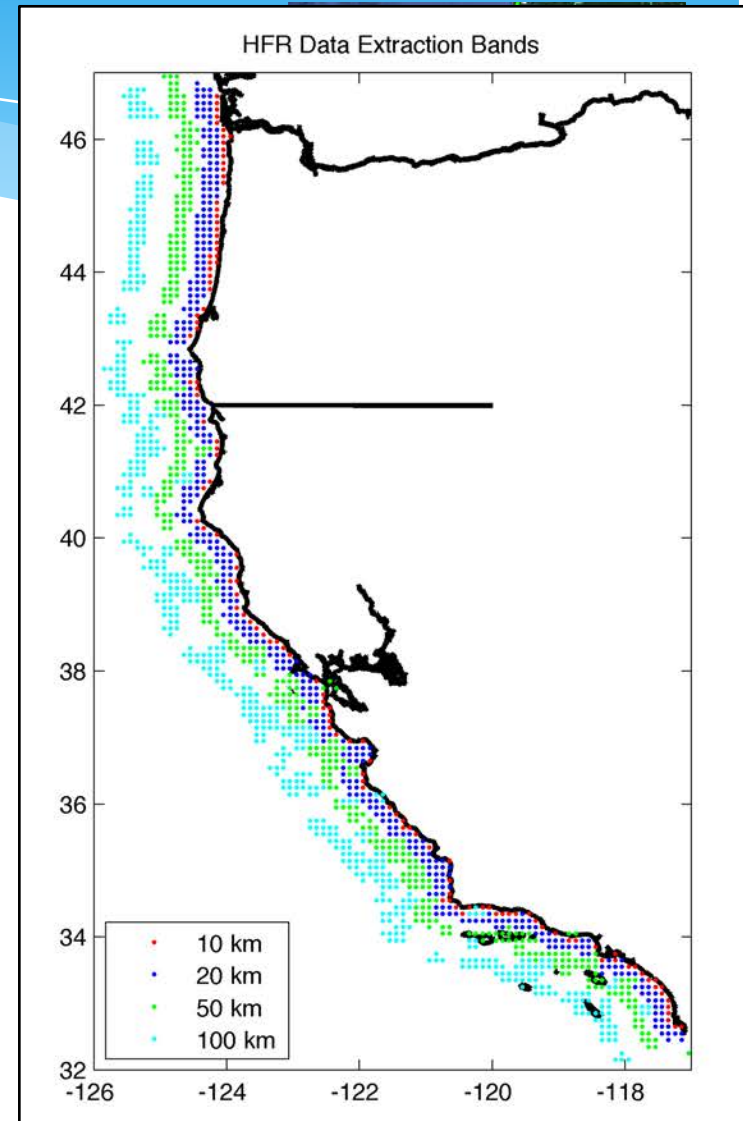

Flow-Shoreline Orientation Analysis

- Relationship of flow to shoreline orientation
 - Simple coast broken into ~10 km segments and orientation extracted
 - Weekly U, V 6-km current data extracted from 20-km wide bands at 10, 20, 50, and 100 km from shore
 - Current data rotated to be alongshore and cross-shore

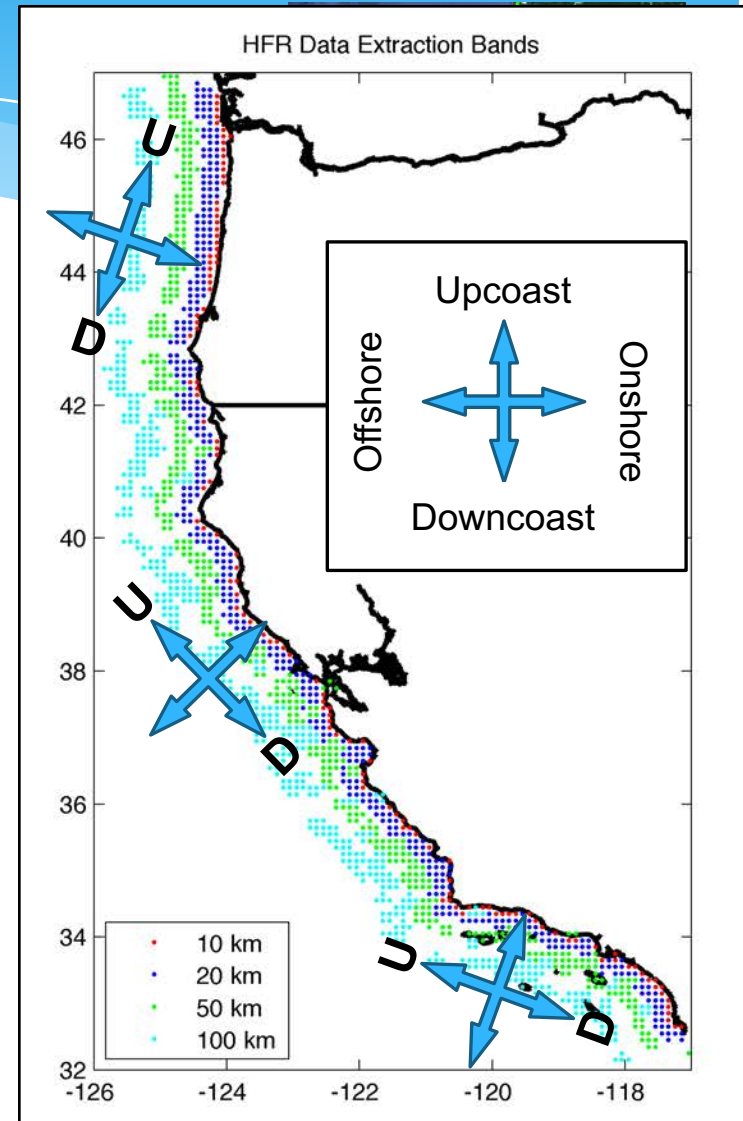

Flow-Shoreline Orientation Analysis

- Relationship of flow to shoreline orientation
 - Simple coast broken into ~10 km segments and orientation extracted
 - Weekly U, V 6-km current data extracted from 20-km wide bands at 10, 20, 50, and 100 km from shore
 - Current data rotated to be alongshore and cross-shore

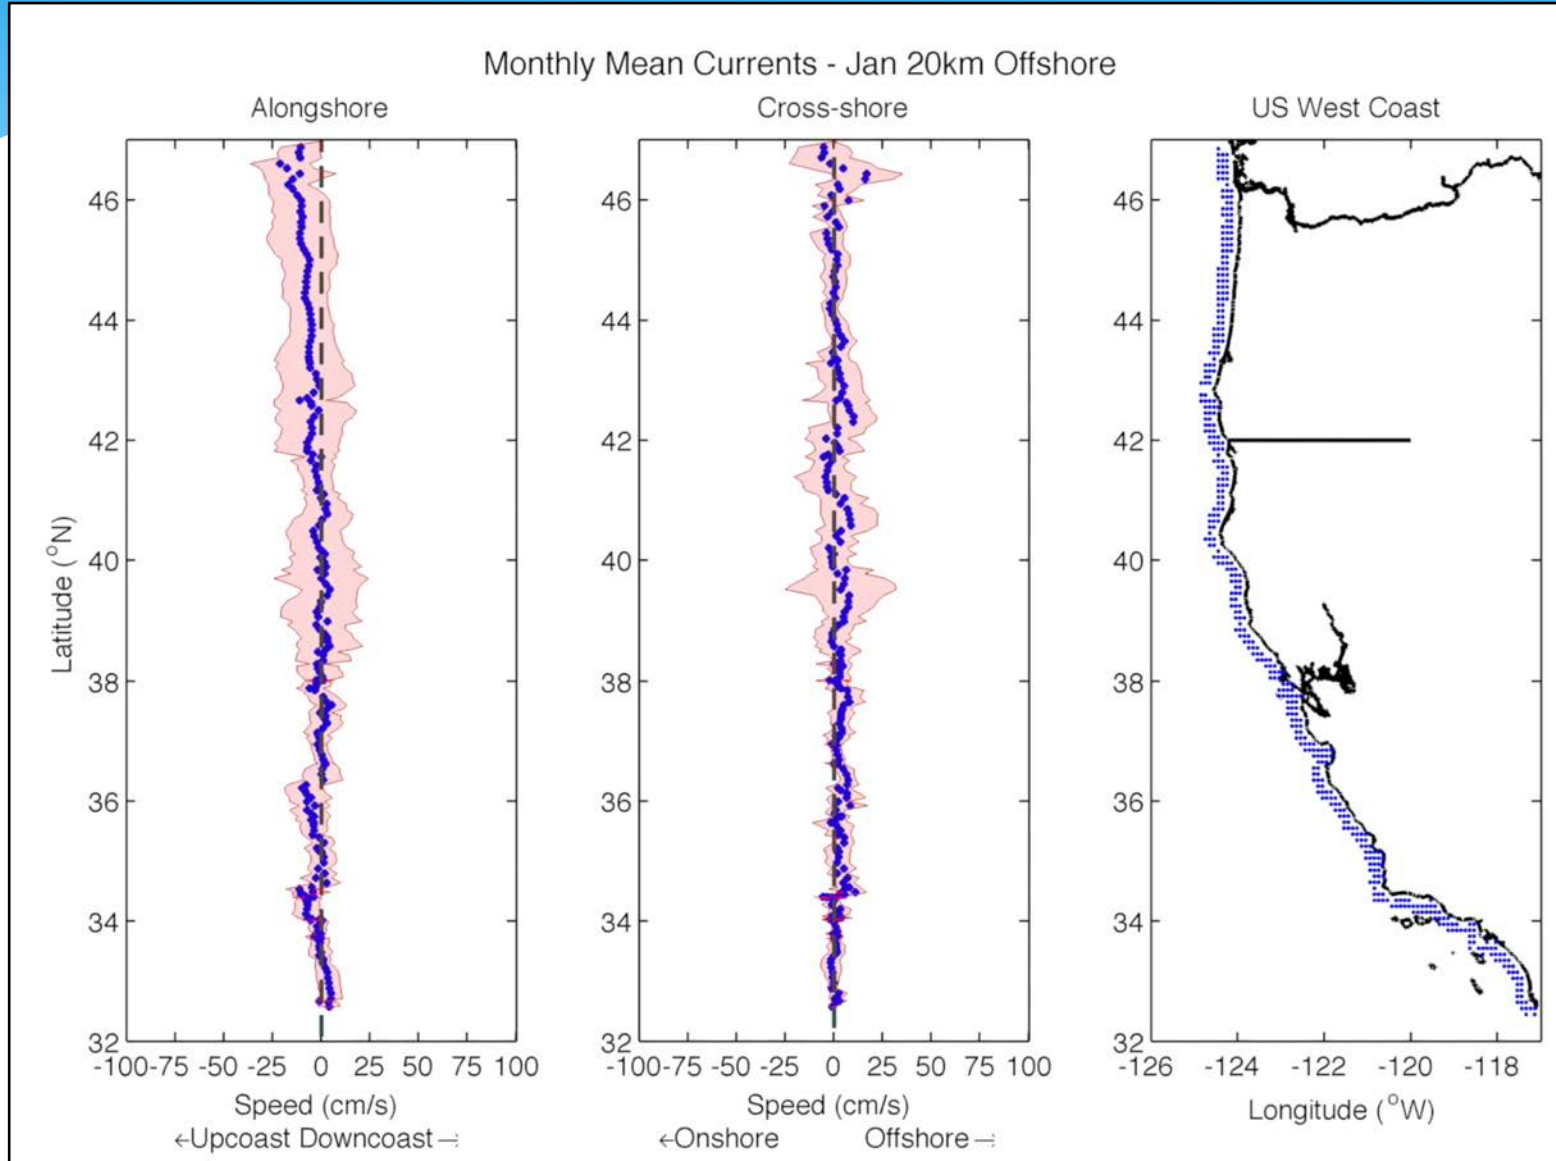

Flow-Shoreline Orientation Analysis

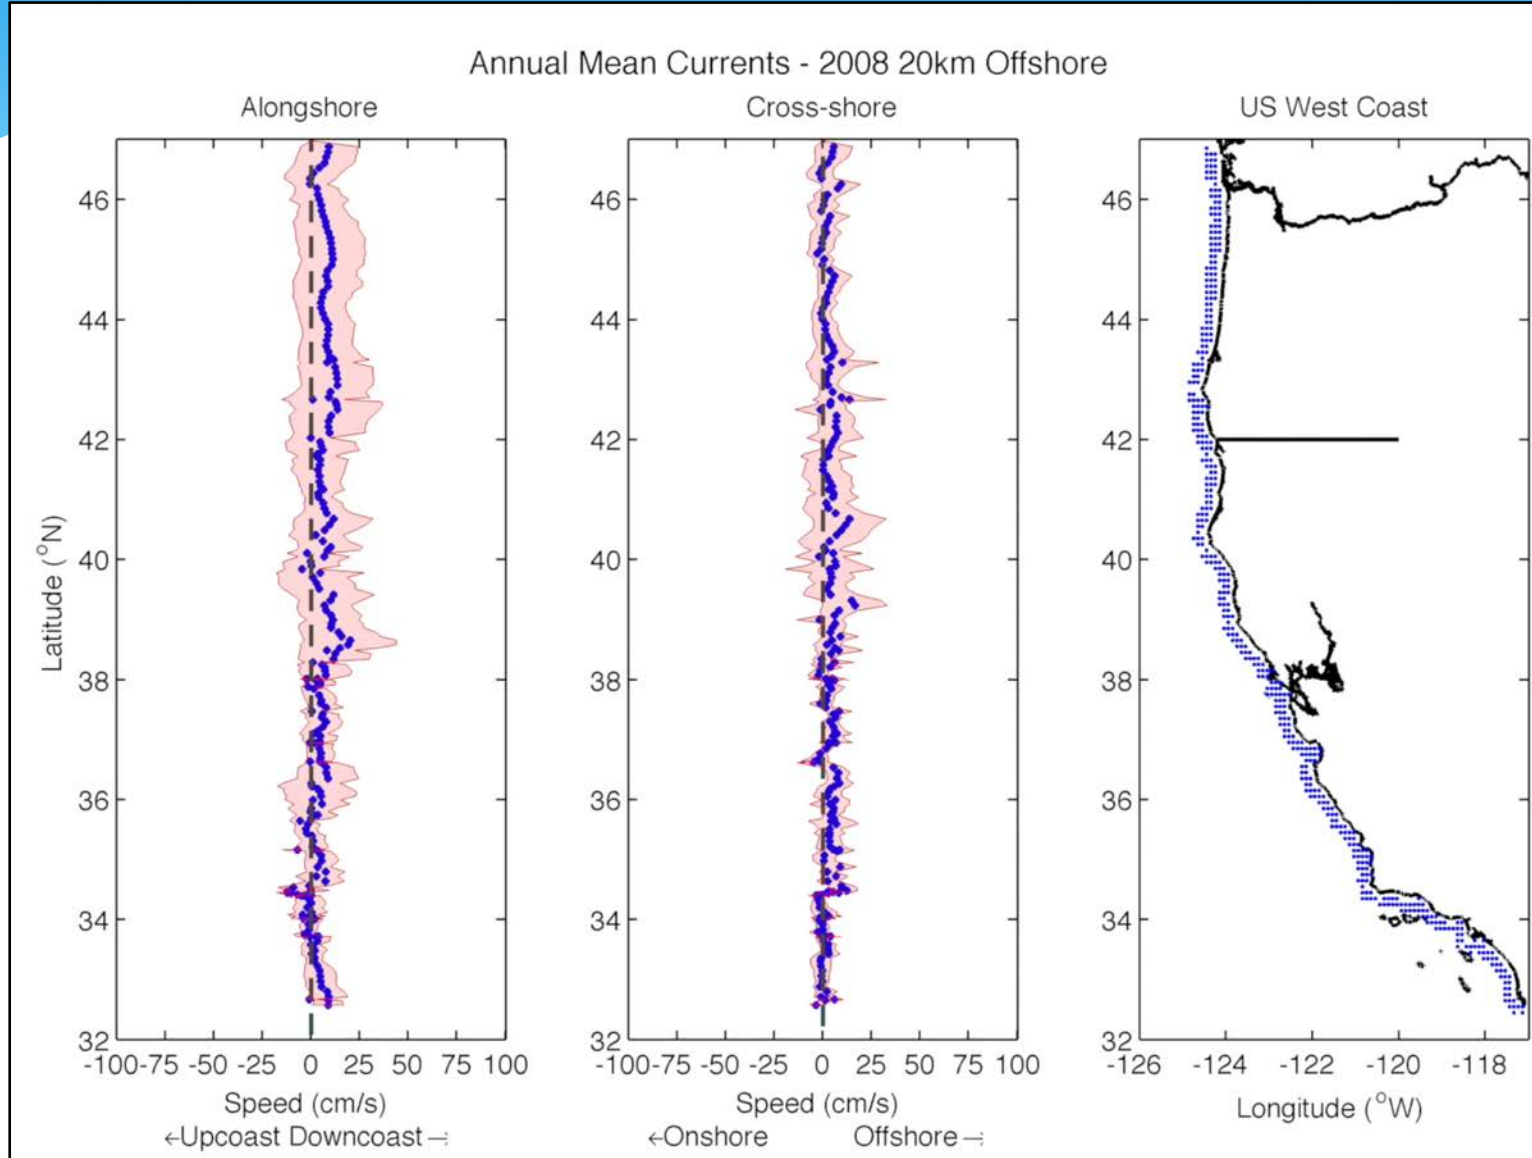

- Relationship of flow to shoreline orientation
 - Simple coast broken into ~10 km segments and orientation extracted
 - Weekly U, V 6-km current data extracted from 20-km wide bands at 10, 20, 50, and 100 km from shore
 - Current data rotated to be alongshore and cross-shore

Seasonal Current Trends (2008-2018)

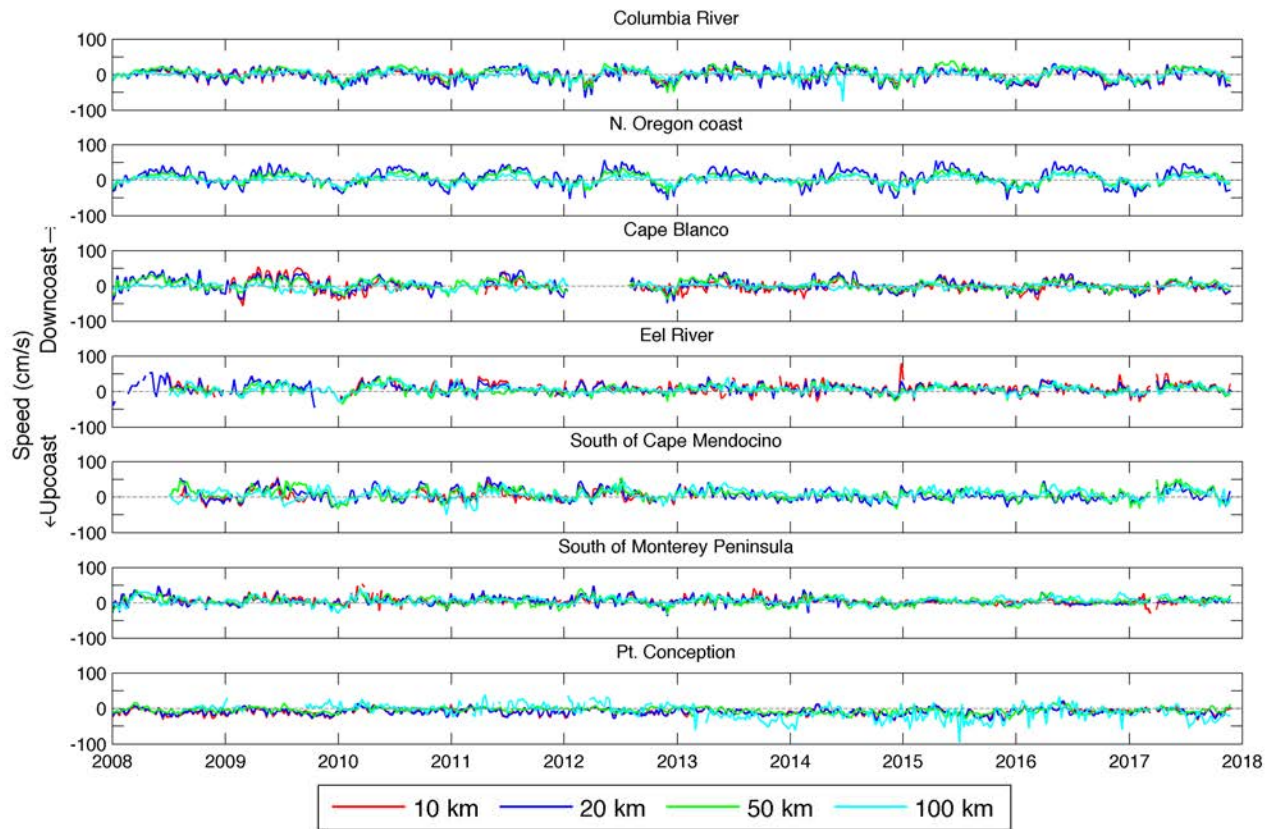

Annual Current Trends (2008-2018)

Cross-shelf Transects (Alongshore Currents)

Cross-shelf Transects: Alongshore Currents

Cross-shelf Transects (Cross-shore Currents)

Cross-shelf Transects: Cross-shore Currents

Parsing a Decade of High Resolution Data

1. Seasonal variability
 - Upwelling and relaxation signals very strong from Oregon to San Francisco Bay zone
2. Inter-annual variability
 - Ocean climate events suppressed the normal southerly flows in 2015-2016
3. Cross-shelf variability
 - Eddies and jets identifiable using the 20- and 50-km offshore regions

What's Next

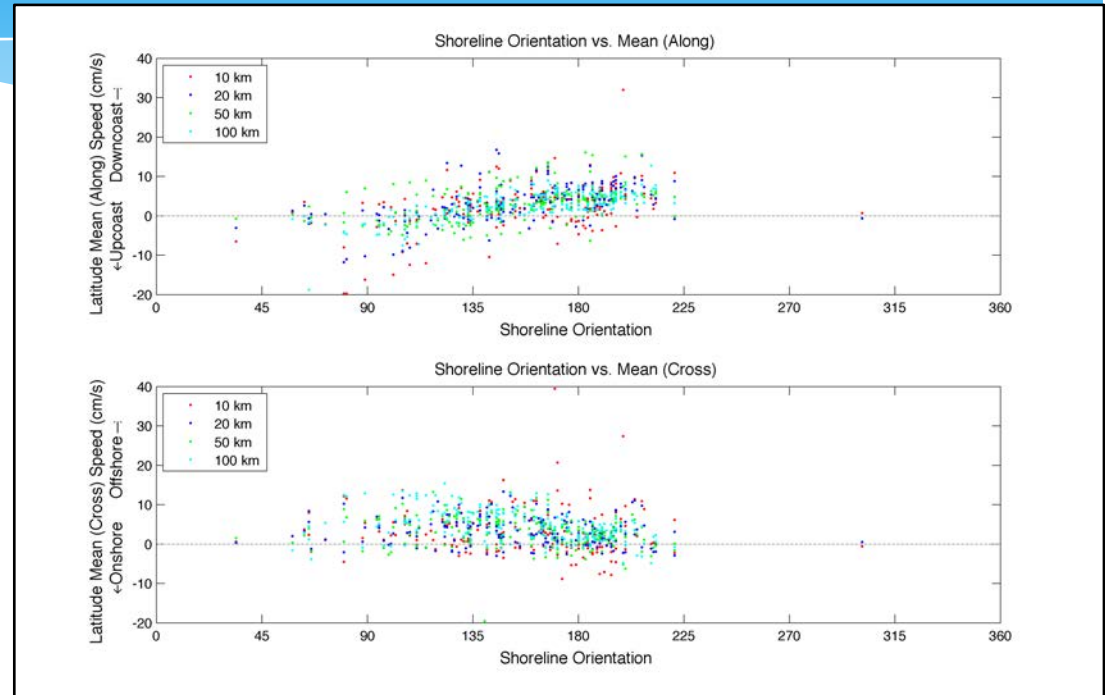

- Correlation Analysis
- Forcings Analysis
(shoreline steering,
meteorology)
- Anomalies Analysis

Inter-annual correlation of alongshore currents

	2008	2009	2010	2011	2012	2013	2014	2015	2016	2017
2008										
2009	0.18									
2010	0.27	0.16								
2011	0.27	0.25	0.16							
2012	0.13	0.08	0.22	0.19						
2013	0.19	0.14	0.10	0.18	0.09					
2014	0.12	0.13	0.22	0.11	0.22	0.15				
2015	0.17	0.15	0.19	0.16	0.20	0.17	0.22			
2016	0.18	0.22	0.20	0.19	0.14	0.10	0.17	0.13		
2017	0.21	0.19	0.28	0.21	0.23	0.09	0.15	0.15	0.30
